SUMMARY

Dual-degree student (B.Tech ECE, VIT Chennai + BS Data Science, IIT Madras) working as an AI Innovation Engineer on enterprise-scale distributed data systems for BFSI and retail clients. I build and ship production features, including data quality platforms, governance automation, distributed query engines, and analytics pipelines, applying agentic AI engineering to deliver well-architected solutions efficiently. Partnered with executive technology teams to systematically analyze, resolve, and enhance system performance while facilitating alignment among cross-functional teams on complex engineering challenges. Strong hands-on experience in Python, JavaScript, SQL, GCP, and Azure, with deep exposure to distributed systems, metadata-driven governance, and cloud-native backend development.

WORK EXPERIENCE

AI Innovation Engineer — Torro Pte Ltd, Singapore (Remote)

Apr 2025 – Present

- Designed and shipped a unified Data Quality & Governance platform on Azure and GCP — combining a Quality Matrix (7 quality dimensions, engine-specific rule packs per data asset) with metadata-driven policy enforcement and compliance profiling, giving IT executives, compliance, and operations a single distributed system view instead of siloed tools — driving ~40% reduction in manual governance triage.
- Built an OSI-model-inspired Insight Agent routing analytical queries across distributed engines (Starburst, Apache Spark), collaborating with the engineering team to design a scalable multi-layer data discovery system for BFSI distributed systems environments.
- Supported performance optimisations in the data discovery feature by debugging synchronous asset discovery bottlenecks, analysing system behaviour across distributed governance workflows, and contributing design changes that improved discovery throughput and reduced latency.
- Engineered GCP BigQuery pipelines — querying and cleaning 40+ platform API tables (thousands of rows tracking activity, ownership, and change events) to power Power BI dashboards that gave executive client teams their first unified, audit-ready view of distributed platform operations and compliance posture.
- Applied agentic AI engineering workflows (LLM-assisted scaffolding, AI tools driven) to ship scalable backend modules efficiently — and consistently brought teammates along by sharing context, unblocking problems collaboratively, and keeping delivery quality high across the team.

Co-Founder & AI Product Lead — Qvanto AI Pvt Ltd (Solutions Partner of Torro)

Aug 2025 – Present

- Designed a hybrid commerce platform for retail — B2B internal commerce and B2C storefront on GCP, connecting enterprise procurement and consumer-facing workflows into a single unified product.
- Delivered BFSI data governance features across distributed systems — metadata management, consent orchestration, and policy enforcement — owning features end to end from design through deployment, contributing to ~50% reduction in manual compliance effort for client teams.
- Led solutioning sessions with executive technology stakeholders across BFSI and retail organizations, translating regulatory requirements into distributed system design decisions and maintaining cross-functional alignment through delivery.

AI Engineer — Crackube Pvt Ltd

Jul 2024 – Apr 2025

- Reduced deployment errors and improved release velocity by designing containerized microservice deployments (Docker) for real-time gaming workloads — owning workflows and collaborating with engineering teams on distributed infrastructure planning.

EDUCATION

B.Tech, Electronics & Communications Engineering

Vellore Institute of Technology, Chennai

Expected 2028

BS, Data Science & Applications

Indian Institute of Technology, Madras

Expected 2028

SKILLS

Languages: Python, JavaScript, TypeScript, SQL

Distributed Systems: Starburst, Apache Spark, Multi-Engine Query Orchestration, Microservices, Cloud-Native Architectures

AI & Automation: Agentic AI Engineering, LLM Integration, AI Workflow Automation, NLP, Prompt Engineering

Cloud & DevOps: GCP (BigQuery), Azure, Docker, Linux, Git

Data & Governance: Data Quality, Metadata-Driven Governance, Policy Enforcement, Data Discovery, Power BI, PostgreSQL, MySQL

Frontend & APIs: React.js, Next.js, REST APIs, HTML5, CSS3

Soft Skills: Cross-Functional Collaboration, Executive Stakeholder Communication, Team Enablement, Problem-Solving, Ownership, Adaptability, Analytical Thinking, Supportiveness
